

CT376 series products are customized and designed by the company. They are made of flame-retardant ABS engineering plastics or PC/ABS alloy plastic materials, combined with epoxy resin casting technology, and have excellent waterproof and moisture-proof properties. The product has been completely redesigned, with excellent structure and beautiful appearance. It can be equipped with a terminal cover for one-time installation as needed, which can provide reliable identification for the terminal wiring safety. The entire series of products are made of high-magnetic silicon steel materials and high-quality enameled round copper wires. They have excellent accuracy, high accuracy limit coefficient, compact structure, easy installation, and are widely used in power distribution systems. The product adopts terminal output and can adopt parallel terminal output structure. Both S1 and S2 terminals have two parallel output terminals for easy wiring. It can also be designed with multiple ratios as needed to adapt to more installation environments.
